

CARPET MAINTENANCE

Carpet maintenance protects carpet appearance and extends its useful life. Wet extraction cleaning leaves detergents and residues that accelerate re-soiling. A dry maintenance system is more effective for preventing re-soiling, and producing the best short-term and long-term results.

Carpet maintenance using MilliCare® advanced polymer-based dry cleaning technology thoroughly cleans and preserves carpet. A custom maintenance strategy based on different traffic patterns in a facility keeps carpet looking its best by providing more frequent maintenance in high traffic areas while low traffic areas only receive occasional service.

Scientific studies clearly show that the MilliCare® process improves indoor air quality. MilliCare® dry polymers absorb the life-giving moisture molds and microbials need to grow. The polymers help maintain a healthier work environment, not only by removing unwanted microbials and allergens from carpet, but by preventing them from coming back.

SERVICE

MilliCare®

FEATURES

- Dry Cleaning Technology
- Customized Maintenance
- Quality Assurance Tracking Program
- Local Sales and Service

BENEFITS

- Extended Life & Appearance
- Cleaning When & Where Needed
- Reduced Air-borne Pollutants
- Healthier Environment
- Minimal Staff Disruption
